

Systems Health Check

A health check/audit will review the entire setup of your OpenAccounts & eBIS solutions, with the items listed below frequently emerging as areas for improvement:

Chart of Accounts
User Profiles
User Security
Supplier Management

Workflows
Reporting
Period End Processing
System knowledge of users

We have performed system health check audits for several organisations that use OpenAccounts, eBIS and Intuitive Dashboards, with each organisation benefiting from the process.

Following the health check, we will generate a report outlining the recommended changes and the additional value these will bring to your organisation. We will then work with you on how to put these recommendations into action.

The approach outlined above has enabled numerous organisations to revolutionise their operations without incurring the significant cost of procuring and implementing a brand-new finance application. By implementing new processes and change management, these organisations have ensured that they are future-proofed for IT audit requirements.
